<p><b>6. Description of content:</b> This draft resolution establishes the guidelines for the risk assessment of exposure of operators, workers, residents, and bystanders to pesticides for the purpose of market authorization, post-market authorization alterations, reassessment, monitoring, and inspection procedures.</p>
<p><b>7. Objective and rationale, including the nature of urgent problems where applicable:</b> Protection of human health.</p> <p>In the past, the guidelines for toxicological evaluation of pesticides were published through Ordinance SNVS/MS No. 03 of 16 January 1992. Since then, scientific knowledge has made significant progress, which has generated the need to review its criteria and requirements in order to update and align the evaluation process with the best practices adopted internationally. This ordinance did not establish criteria for risk assessment to individuals exposed to pesticides due to work activities, that is, occupational risk assessment. It is necessary to assess the health risks of rural workers who handle and/or apply pesticides, including those who only enter the agricultural area where the application was made (e.g., to harvest food treated with pesticides). In addition, people who live nearby or those who may be sporadically close to the treated areas should have the risk assessed. As a consequence of these evaluations, necessary measures can be adopted for the purpose of</p>

protecting the health of these populations.
